

Smart Valve Positioner 200 Series

Model AVP200/201/202

Overview

Smart Valve Positioner 200 Series models AVP200/201/202 are current-pneumatic smart valve positioners with a separate valve travel detector.

The valve detector and positioner are interconnected with a remote cable.

By installing only its valve detector onto the valve body, it will drastically make positioner maintenance easier as well as improving anti-vibration characteristics.

The model AVP201 has a valve travel transmitter function which transmits a 4-20 mA signal.

The model AVP202 has a HART Communication protocol.

Features

Anti-vibration characteristics 10G, 2000Hz

Vibration resistance has been improved so that it is five times more durable than conventional current-pneumatic positioners.

It is suitable for valves that are located in an environment with strong vibration, which previously could use only pneumatic positioners.

Easy to use

• Auto setup

The auto-setup function is a fully-automatic configuration program which specifies the actuator and adjusts the zero and span of the valve. The program can be turned on simply from an external switch so that adjustments to the valve can be performed quickly and safely in hazardous areas.

High reliability

• Positive seating

The positive seating function completely shuts off the valve if the input signal becomes lower than previously set. This in turn enhances the full shut-off capabilities of the valves.

• Self-diagnostic

The self-diagnostic function provides with the ability to check the status of the positioner at any time and to alert in case of failure.

Single model for multiple specifications

The 200 Series' settings can be changed without replacing any parts. A single model can be modified to suit any application.

• Input range:

Configurable to any required range for split range

• Flow characteristic:

Linear, EQ%, Quick opening or custom user characteristics

• Actuator type:

Single or double acting actuator (optional reversing relay required)

Travel transmission

The model AVP201 transmits a 4-20 mA signal proportional to the valve travel. The valve travel can be monitored from the control room.

Wiring Connection

The wiring method differs depending on whether this device is used as a normal current-pneumatic positioner or as a positioner with a travel transmission function. When using this device as a normal current-pneumatic positioner, it is necessary only to connect the positioner to the host controller with an input signal cable (4-20 mA DC) as with previous models. Figures 1 and 2 show the wiring diagrams.

Figure 1. Normal current-pneumatic positioner (model AVP200/202)

Figure 2. Positioner with travel transmission function (model AVP201)

*1. For load resistance, refer to Figure 3.

Figure 3. Supply voltage for travel transmission vs. load resistance characteristic

Note) Supply voltage shall be limited to 45 V DC

*2. Load resistance = Resistance for Monitoring system + $250 \Omega^{*1}$ + Resistance of supply voltage^{*1}

List of Features

Item	Function
Desired input signal range	Any split-range value can be specified.
Forced fully open/closed	The control valve can be fully closed or opened securely when the desired percentage of input signal is reached.
Desired flow characteristics	The relationship between input signal and valve travel that is appropriate for the process can be defined by using a 15-point broken line.
Travel transmission (option)	Valve motion can be reliably monitored by transmitting the valve travel.

Standard Specifications

Item	Specification
Applicable actuator	Pneumatic single and double acting, linear and rotary motion actuator
Input signal	4-20 mA DC (Configurable to any required range for split range minimum span 4 mA DC.) Minimum driving current: 3.85 mA In case of model AVP201 when signal input is less than 3.85 mA, output current will be burnout.
Output signal	4-20 mA DC (Travel transmission)
Input resistance	300 Ω typically / 20 mA DC (Model AVP200/201) 400 Ω typically / 20 mA DC (Model AVP202)
Lightning protection	Peak value of voltage surge: 12 kV Peak value of current surge: 1000 A
Flow characteristics	Linear, Equal percentage, Quick opening Custom user characteristics (15 segments)
Manual operation	Auto/Manual external switch (For single acting actuator only)
Supply air pressure	140 to 700 kPa
Air consumption	for single acting actuator 4 L/min (N) or less: with steady supply air pressure of 140 kPa {1.4 kgf/cm ² } and output of 50 % 5 L/min (N) or less: with steady supply air pressure of 280 kPa {2.8 kgf/cm ² } and output of 50 % 6 L/min (N) or less: with steady supply air pressure of 500 kPa {5.0 kgf/cm ² } and output of 50 % for double acting actuator 10 L/min (N) or less: with steady supply air pressure of 400 kPa {4.0 kgf/cm ² }
Output balanced pressure	55±5% for double acting actuator only
Maximum air deliver flowrate	for single acting actuator 110 L/min (N) maximum at 140 kPa {1.4 kgf/cm ² } for double acting actuator 250 L/min (N) maximum at 400 kPa {4.0 kgf/cm ² }
Air connections	Rc1/4 or 1/4NPT internal thread
Electrical connections	G1/2, 1/2NPT or M20 × 1.5 internal thread
Ambient temperature limits	-40 to +80°C for general model TIIS Flameproof: -20 to +55°C
Ambient humidity limits	10 to 90 %RH
Vibration characteristics	Body: 20 m/s ² , 5 to 400 Hz Valve travel detector: 100 m/s ² , 5 to 2000 Hz (with standard mounting kit on Azbil Corporation's HA actuator)
Finish	Baked acrylic
Color	Dark blue
Material	Body case: Cast aluminum Case of valve travel detector: Stainless steel Cable: Polyvinyl chloride for ambient temperature up to 80°C
Weight	Body For single acting actuator Without Pressure regulator with filter: 3.3 kg With Pressure regulator with filter: 4.0 kg For double acting actuator Without Pressure regulator with filter: 3.6 kg With Pressure regulator with filter: 4.3 kg Valve travel detector: 1.0 kg Cable: 0.2 kg/m Outer diameter: 9.8 mm Sheath material: PDC (PVC)

Item		Specification								
Performance	Accuracy	±1% F.S. (±2.5% with custom output characteristics) Depending on cable length, the accuracy varies as follows: <table border="1" data-bbox="461 212 828 353"> <thead> <tr> <th>Cable length</th> <th>Accuracy</th> </tr> </thead> <tbody> <tr> <td>5 m</td> <td>±1.2% F.S.</td> </tr> <tr> <td>10 m</td> <td>±1.7% F.S.</td> </tr> <tr> <td>20 m</td> <td>±2.7% F.S.</td> </tr> </tbody> </table> For 4 mA ≤ input signal span < 8 mA, ±1.5% F.S. <i>Note) Depend on the air pipe diameter, or pipe length, the auto setup program will not properly operate.</i>	Cable length	Accuracy	5 m	±1.2% F.S.	10 m	±1.7% F.S.	20 m	±2.7% F.S.
	Cable length	Accuracy								
	5 m	±1.2% F.S.								
10 m	±1.7% F.S.									
20 m	±2.7% F.S.									
Travel transmission accuracy	±1 % F.S. (±2.5% with output characteristics modification) Only for travel transmission type (model AVP201)									
Stroke coverage	14.3 to 100 mm Stroke (Feedback Lever Angle ±4° to ±20°)									
Enclosure classification		JIS C0920 watertight								
Configuration tools		Field Communication Software CommStaff Model CFS100								
Approvals		TIIS Flameproof Body: Ex d IIC T6 Approval No.TC17094 Valve travel detector: Ex d IIC T6 Approval No.TC20454								

Conditions of supply air (JIS C1805-1 (2001))

Item	Specification
Particles	Maximum diameter 3 μm
Oil mist	Less than 1 ppm at mass
Humidity of the air supply	The dew point should be at least 10°C lower than the temperature of this device.

To meet the above specifications for instrument air, install the air purification devices listed below properly in the specified installation location.

Examples of air purification devices

Installation	Air purification device	SMC corporation	CKD corporation
Compressor outlet or main line	Line filter	AFF series	AF series
	Mist separator	AM series	
Terminal device	Mist separator	AM150 or AM250 series	M3000S type

Model Selection

Basic model number

		(1)	(2)	(3)	(4)	(5)
AVP200	Analog signal (4-20 mA DC) without travel transmission					
AVP201	Analog signal (4-20 mA DC) with travel transmission					
AVP202	Analog signal (4-20 mA DC) HART communication protocol					
		(Air pipes, conduit connections)				
(1) Structure	Water-proof	(Rc1/4, G1/2)	X			
	Water-proof	(1/4 NPT, 1/2 NPT)	P			
	TIIS Flameproof with cable gland *1	(Rc1/4, G1/2)	E			
(2) Finish	Standard (Baked acrylic) *2			S		
	Corrosion proof (Baked epoxy) *2			B		
	Silver finish (Baked acrylic)			D		
(3) Positioner action *4	Direct action - Air pressure increases with control signal increase				D	
	Reverse action - Air pressure decreases with control signal increase				R	
(4) Supply air pressure classification	(pressure gauge range, max. voltage setting of regulator)					
	130 ≤ Ps ≤ 150 kPa	(200 kPa, 400 kPa)			1	
	150 < Ps ≤ 300 kPa	(400 kPa, 400 kPa)			2	
	300 < Ps ≤ 400 kPa	(600 kPa, 400 kPa)			3	
	400 < Ps ≤ 450 kPa	(600 kPa, 700 kPa)			4	
	450 < Ps ≤ 700 kPa	(1000 kPa, 700 kPa)			5	
(5) Scale unit (Pressure gauge)	kPa					A
	(kgf/cm ²) *3					(B)
	MPa					C
	bar					D
	(psi) *3					(E)

*1. One set of TIIS Flameproof cable gland shall be attached for model AVP200. Two sets are for model AVP201.

*2. Standard finish is equal to previous Y138A. Corrosion proof is equal to previous Y138B.

*3. No domestic sales in Japan due to Non-SI unit.

*4. When the input signal (power) is shut off, select direct action to make the output air pressure of this device zero, and reverse action to make the output at the maximum air pressure (supply air pressure).

Positioner action differs from actuator and control valve action, so be careful in selecting the positioner's action.

Individual specifications

Following shows default and optional settings of each configurable parameter of AVP.

Unless otherwise specified, the Smart Valve Positioner will be shipped in the following configuration.

Input control signal	4-20 mA	The minimal span for custom range = 4 mA
Output characteristic *1	Liner	EQ or QO can be ordered or set by user.
Valve action *2	Direct (Plug above seat)	Reverse (Plug below seat) can be ordered or set by use
Output signal for position transmission	4-20 mA	DE also selectable

*1. Refer to the following when selecting the input/output characteristics.

*2. Positioner action differs from actuator and control valve action, so be careful in selecting the positioner's action.

Figure 4. Input-output characterization

Selection of input characterization

The flow characteristic of a control valve is set by selecting the valve plug characteristic, and the input-output characteristics of the positioner must be specified as linear. However, if the valve plug flow characteristic, which depends on the control valve's shape and structure, does not meet requirements, you can correct the overall flow characteristic of the control valve by specifying "equal percentage" or "quick opening" for the input-output characteristics of the positioner, as shown in Table 1.

Table 1. Control valve flow characteristics correction by the positioner

Characteristic of valve plug	Input-output characterization of positioner	Overall flow characteristic of control valve
Linear	Quick opening	Quick opening
Linear	EQ%	EQ%
EQ%	Quick opening	Linear

Note: If the valve plug characteristic is "quick opening," the overall flow characteristic of the control valve cannot be linear even if "equal percentage" is set for the positioner's input-output characteristics. (This is because when the valve plug characteristic is "quick opening," the control valve works as an ON/OFF valve and it is difficult to correct its characteristics by changing the setting of the positioner.)

Accessory Selection		(6)	(7)	(8)	(9)	-	(10)

		Actuators of other manufacturers				See Table 3		
(10) Option		With terminal box for remote cable assembly (standard)						M
		Double bearing valve travel detector (This code must be selected)						L
		Universal elbow explosion-proof (SUS304 G1/2) 1 pc. For model AVP200 *4						A
		Universal elbow explosion-proof (SUS304 G1/2) 2 pcs. For model AVP201 *4						C
		Stainless filter for KZ03 (Pressure regulator with filter)						K
	Filter (Screen for air-exhaust port)						H	
	Seal tape prohibited						J	
	Stainless mounting kit of a positioner side and pressure regulator with filter						U	
	Mounting bracket for accessories on GOM actuator (in case of replacing GOP) *13						8	
Reversing relay for double acting actuator						W		

- *1. Select model AVP200/AVP201 only when the direction of drain of the pressure regulator with filter on the control valve is downward (ground).
- *2. Select "YW" or "YJ" for old-type motion connectors. (Produced on/before Apr.'83)
- *3. Consult a sales representative in case of no mounting hole on the side of valve yoke.
- *4. For TIIS Flameproof model, these elbows should be put on the supplied cable gland. Code "A" and "C" can not be selected simultaneously.
- *5. Select "YW" or "YJ" for old-type motion connectors.
- *6. Code "W" of option (10) must be selected.
- *10. In case "VM" type actuator is required following conditions,
 1. select model "VCT" for the body,
 2. the existing positioner should be HEP or VPE,
 3. yoke should be model HK. If another specification is required, contact your sales representative.
- *11. For the double acting actuator, a reversing relay unit required.
- *12. If the valve body is for VFR (FloWing) or a butterfly valve, for the mounting bracket requirement consult to our sales.
- *13. Select the option with the restoration feedback lever, if GOM manufactured before April, 1988.
Select the option '8' (Accessory bracket for GOM actuator - Use the case of existing GOP) if the existing control valve assembled with GOP and the accessories such as the Lock-up valves and solenoid valves.
